# Woodlands Conservancy acquires 190 acres in Lower Coast Algiers

0  
comments

By **Andrea Shaw, NOLA.com | The Times-Picayune**  
on January 18, 2013 at 4:16 PM, updated January 19, 2013 at 1:33 AM

Capping a process more than a decade in the making, **Woodlands Conservancy** has acquired **190 acres of bottomland hardwood** wetlands in Lower Coast **Algiers** to preserve it from development and to protect the habitat for migratory birds and other wildlife. Conservancy leaders said it took 12 years to complete the transaction **during the announcement Friday** on the property outside English Turn.

Woodlands Conservancy supporters get a glimpse Friday of the 190-acre property the group has purchased in Lower Coast Algiers.

“We’re creating a legacy for future generations,” said Heidi Poche, president of the Woodlands Conservancy board.

The conservancy already manages 600 acres of forested wetlands that straddle a 10,000-acre peninsula formed by Orleans and Plaquemines parishes.

The Algiers property's location makes the purchase even more significant when one considers the rapid loss of wetlands, said Ray Herndon of the **Conservation Fund**, which has provided legal support to the Conservancy throughout the process.

“In the 80s, a lot of ditching and drainage of wetlands that occurred eliminated about 19 million acres across the country,” Herndon said. About 5 million acres remain and every bit counts, he said.

“This is a significant parcel,” he said.

The purchase from the Archdiocese of New Orleans cost \$500,000 and was paid for by a businessman who wants to remain anonymous, said Conservancy Executive Director Katie Brasted. The Algiers property is parallel to the Woodlands Trail and Park in Belle Chasse, which is managed by the group. It is also near the Audubon Center for the Research of Endangered Species, which will begin **construction on a 1,000-acre breeding facility** in conjunction with San Diego Zoo Global later this year.

represents Algiers, called the purchase “one of the most important things that has happened in this region, in this city in a very long time.”

Palmer said she hopes to connect a bike path under construction along the levee in Algiers to hiking trails on the Conservancy’s property.

“It’s a tremendous gift we can give all of our children,” she said.

To help the Conservancy with its mission, Shell contributed \$35,000 to the group.

Brasted said the U.S. Wildlife and Fisheries Service will visit the property next week and assist the group in developing a management plan.

She predicted the first task will be to tackle the invasive species that threaten to choke out native hardwoods. The forest of cypresses and tupelos must contend with the Chinese tallow, privet and Chinaberry trees that exploded in the area after Hurricane Katrina.

Sean Anderson, a professor at California State University Channel Islands, which has been assisting the Conservancy, said not only does the cypress and tupelo create a more densely populated and diverse habitat of animals, birds and insects, but it serves as a stronger barrier to wave action.

“It’s like toothpicks versus two-by-fours,” Anderson said of the invasive trees.

Poche asked supporters attending Friday’s announcement to spread the word about the Conservancy’s work. “It’s just the beginning. We need your help,” she said. Referencing the Martin Luther King Jr. national holiday Monday, Poche said she has faith in Brasted’s plan.

“We have bought into this vision,” Poche said. “Martin Luther King said you don’t have to see the whole stair case. Just take the first step.”
