

**Date:** September 9, 2016

**Site:** Woodlands Trail

**Volunteers/ Banders:**

Emma DeLeon

Jed Pitre

Warren James

Megan Nepshinsky

Austin Culotta

Mary Balyeat

**Time/Conditions:** Nets were open from 6:20 until 12:45 under warm partially cloudy conditions.

**Capture Summary:**

We captured 12 new birds and recaptured 1 individual from a previous session for a total of 13 captures.

We captured 7 species

Northern Cardinal (2)

Yellow Warbler (2)

Acadian Flycatcher (1)

Common Yellowthroat (1)

White-eyed Vireo (3)

Prothonotary Warbler (1)

Carolina Wren (3)

**Notes:**

We had a nice variety of captures today including a mix of resident and migrant birds. Some of the warblers had enough stored body fat that they are most likely on their fall migration. The Acadian flycatcher was also somewhat unusual as we do not capture many flycatchers. Empidonax flycatchers are notoriously difficult to identify (even in hand) so this bird was an interesting challenge!
